CRISTINA

Installation Instructions

CRIBA48415 | Blade Series | Alux

Before installation

Installation must be carried out by a competent plumber. Check the full SKU, finish and supplied parts. Verify the manufacturer drawing against the actual product before drilling, tiling or making cutouts. Isolate the water and protect the finished surfaces.

Product and installation requirements

Wall-mounted spout, 1/2" connection, spout length 180 mm

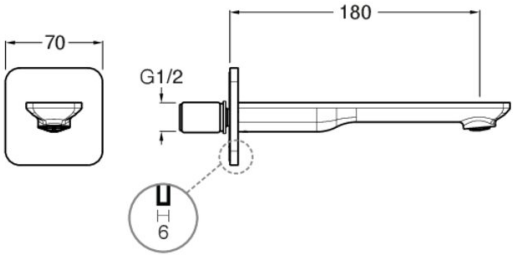
Use the supplied assembly and the model-specific fitting drawing.

Pipework and fitting

Flush the pipework before connecting the fitting. Follow the connection sizes, mounting positions, fixing sequence and depth limits in the manufacturer drawings. Follow the operating pressure and temperature requirements in the enclosed manufacturer instructions; do not substitute values from a different model.

Commissioning and handover

Open the supplies gradually and check all connections for leaks. Check the fixing, outlet flow and every fitted control, diverter, waste or shower function. For thermostatic models, commission and check the temperature control as instructed by Cristina. Resolve any leak or abnormal operation before handover. Provide these instructions and the care guide to the owner.

Manufacturer diagrams


For this wall spout, use the original dimension drawing below to confirm the 1/2-inch connection and projection. Fit to a secure compatible supply connection and test for leaks.
