

CRIFT103

The geometry of the prism meets the functionality of the mixer. The series offered in numerous finishes, is equipped with the technological and functional plus that are typical of our brand's products. The name refers to the geometric figure of the prism. The mixers are made of mainly low-lead brass, and the manufacturing process (from turning and hot pressing of the control lever to the casting in gravity of the bathtub and shower body) is carried out at every single stage in-house, an additional guarantee to the perfect realization of the product. The series is valuable and sought-after both for its mechanical workmanship - the greatest difficulty lies in keeping the radii of the surface always equally sized and strictly geometrical - both for the considerable craftsmanship required in the smoothing, polishing and brushing phases. The body of the mixer is characterised by several flat strips that create the faces, limited by parallel lines that create the edges.
